Biological and Medical Physics, Biomedical Engineering

Editor-in-chief: B.S. Gerstman
Series Editors: M. Aizawa (et al.)

This series is intended to be comprehensive, covering a broad range of topics important to the study of the physical, chemical and biological sciences. Its goal is to provide scientists and engineers with textbooks, monographs, and reference works to address the growing need for information. The fields of biological and medical physics and biomedical engineering are broad, multidisciplinary and dynamic. They lie at the crossroads of frontier research in physics, biology, chemistry, and medicine.

Books in the series emphasize established and emergent areas of science including molecular, membrane, and mathematical biophysics; photosynthetic energy harvesting and conversion; information processing; physical principles of genetics; sensory communications; automata networks, neural networks, and cellular automata. Equally important is coverage of applied aspects of biological and medical physics and biomedical engineering such as molecular electronic components and devices, biosensors, medicine, imaging, physical principles of renewable energy production, advanced prostheses, and environmental control and engineering.

Recently published:

V. Blazek, J. Kumar V., S. Leonhardt, M. Mukunda Rao (Eds.)

Studies in Skin Perfusion Dynamics

Photoplethysmography and its Applications in Medical Diagnostics

K. Inthavong, N. Singh, E. Wong, J. Tu (Eds.)

Clinical and Biomedical Engineering in the Human Nose

A Computational Fluid Dynamics Approach

S.P. Cramer

X-Ray Spectroscopy with Synchrotron Radiation

Fundamentals and Applications

Upcoming Volumes:

M.O. Dada, B.O. Awojoyogbe

Computational Molecular Magnetic Resonance Imaging for Neuro-oncology

V.A. Khokhlova, L.A. Crum, G. ter Haar, J.-F. Aubry (Eds.)

High Intensity Focused Ultrasound Therapy

Fundamentals through Clinical Challenges
