## Experimental Fluid Mechanics

Series Editors: D. Rockwell, C. Tropea

Presenting unified treatments of current aspects of experimental fluid mechanics at a level useful to graduate students, researchers, and practicing engineers, this series serves the research community by consolidating widespread and often scattered knowledge. The books and monographs are equally suitable for learning and reference, and relevant topics are experimental techniques whose mastery requires a knowledge that can conveniently be contained in a book, as well as topics in fluid dynamics where understanding is based largely, though not necessarily exclusively, upon experiments. Thus, the books may contain up to one-third theory, and each one is a complete, integrated discourse, as opposed to a group of essays on selected sub-topics, with an editor or principal author responsible for unifying the conceptual content.

### Recently published:

M. Reader-Harris

Orifice Plates and Venturi Tubes

C. Bailly, G. Comte-Bellot

Turbulence

T. Astarita, G.M. Carlomagno

Infrared Thermography for Thermo-Fluid-Dynamics

### Upcoming Volumes:

T. Liu, J.P. Sullivan, K. Asai, C. Klein, Y. Egami

Pressure and Temperature Sensitive Paints
