Infectious Diseases and Therapy

Co-Editor-in-Chief: M.J. Rybak, Pharm.D., MPH, Ph.D.; A. Soriano

Infectious Diseases and Therapy is an international, open access, peer-reviewed, rapid publication (peer review in 2 weeks, published 3–4 weeks from acceptance) journal dedicated to the publication of high-quality preclinical, clinical (all phases), observational, real-world, and health outcomes research around the discovery, development, and use of infectious disease therapies and interventions, including vaccines and devices. Studies relating to diagnostic products and diagnosis, pharmacoeconomics, public health, quality of life, and patient care, management, and education are also encouraged.

Areas of focus include, but are not limited to, bacterial and fungal infections, viral infections (including HIV/AIDS and hepatitis), parasitological diseases, tuberculosis and other mycobacterial diseases, vaccinations and other interventions, and drug-resistance, chronic infections, epidemiology and tropical, emergent, pediatric, dermal and sexually-transmitted diseases.

The journal is of interest to a broad audience of pharmaceutical and healthcare professionals and publishes original research, reviews, case reports, and short communications. The journal appeals to a global audience and receives submissions from all over the world. Articles published in *Infectious Diseases and Therapy* may be accompanied by lay-level summaries, to assist patients (and caregivers) in understanding important medical advances.

Moving forward from traditional publishing, *Infectious Diseases and Therapy* offers a range of additional enhanced features designed to increase visibility, readership, and the educational value of the content. Each paper is accompanied by a bulleted Summary slide, giving a time-efficient overview of the content to a wide readership. Articles also have the option to include various other types of enhanced features including slide sets, videos and animations. All enhanced features are open access and are peer reviewed to the same high standard as the article itself.

Infectious Diseases and Therapy is published under the Creative Commons Attribution-Noncommercial License, which allows users to read, copy, distribute, and make derivative works for non-commercial purposes from the material, as long as the author of the original work is cited. The author assigns the exclusive right to any commercial use of the article to Springer.
