Integrating Materials and Manufacturing Innovation

Editor-in-Chief: C. Ward

- ▶ Research that supports building a model-based definition of materials and processes that is compatible with model-based engineering design processes and multidisciplinary design optimization
- ▶ Descriptions of novel experimental or computational tools or data analysis techniques, and their application, that are to be used for ICME
- ▶ Best practices in verification and validation of computational tools, sensitivity analysis, uncertainty quantification, and data management, as well as standards and protocols for software integration and exchange of data
- ▶ In-depth descriptions of data, databases, and database tools
- ▶ Detailed case studies on efforts, and their impact, that integrate experiment and computation to solve an enduring engineering problem in materials and manufacturing

The journal supports Review articles, Research articles, Brief Communications, Case Studies, Commentaries, and Data Descriptor articles. See the Instructions for Authors for more information.
