This journal covers surveys, methodological, and application-oriented papers presenting advanced technologies and practical applications in the emerging fields of Robotics and Mechatronics.

The ROBOMECH Journal aims at the advanced technologies and practical applications in the field of Robotics and Mechatronics. This field is growing in terms of the daily commodity to advanced space robotics and systems.

Many readers may realize how difficult it is to define Robotics and Mechatronics clearly. There are numerous definitions by many people. However, none of them can be said to be the best in describing advanced robotics mechatronics, since Mechatronics is continually evolving. In this Journal we tentatively define Mechatronics as “the synergetic integration of mechanical engineering and informatics with electronic and intelligent computer control in the design and manufacturing of products and processes”. The scope of ROBOMECH Journal encompasses all practical aspects of the theory and methods of Robotics and Mechatronics.

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
