BMC Nutrition

- Interdisciplinary focus covering basic, clinical, epidemiological and public health research
- Transparent and open peer review process overseen by an expert Editorial Board
- Rapid publication upon acceptance (average time from acceptance to publication is less than 10 days)

*BMC Nutrition* is an open access, peer-reviewed journal that considers articles on all aspects of nutritional sciences, including public health nutrition and global interventions, nutritional epidemiology, the biological underpinnings of nutrition in the body, clinical nutrition, health and nutrition throughout the lifecourse, and dietary supplementation for improvement in health and performance. The journal also welcomes papers on developments in nutritional research tools and novel technologies.

*BMC Nutrition* is part of the *BMC* series which publishes subject-specific journals focused on the needs of individual research communities across all areas of biology and medicine. We do not make editorial decisions on the basis of the interest of a study or its likely impact. Studies must be scientifically valid; for research articles this includes a scientifically sound research question, the use of suitable methods and analysis, and following community-agreed standards relevant to the research field.

Giving authors in their area of expertise the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
