Environmental Sciences

Subseries of Springer Praxis Books

The *Springer-Praxis Environmental Sciences* programme covers a wide range of selected key topics concerning all aspects of humankind's environment and significant impacts on that environment.

Topics include:

- the Arctic and Antarctic environments
- atmosphere
- oceans and ice
- regional and global climates and climate variability
- global environmental change
- interactions between atmosphere, oceans and land
- natural & anthropogenic influences on climate and the environment including all aspects of pollution

The books are well illustrated with line diagrams and photographs throughout, with extensive use of colour for scientific interpretation and understanding. They feature extensive references and bibliographies, glossaries and appendices.

The books are written for a readership of environmental scientists and researchers in the field and professional people, including policy makers, with an interest in important environmental issues who have a comparable level of scientific knowledge.

Recently published:

D. RAPP

Assessing Climate Change

Temperatures, Solar Radiation and Heat Balance
