Springer Series on Atomic, Optical, and Plasma Physics

Editor-in-chief: G. Drake

Series Editors: J. Babb, A.D. Bandrauk, K. Bartschat, C.J. Joachain, M. Keidar, P. Lambropoulos, G. Leuchs, A. Velikovich

The Springer Series on Atomic, Optical, and Plasma Physics covers in a comprehensive manner theory and experiment in the entire field of atoms and molecules and their interaction with electromagnetic radiation. Books in the series provide a rich source of new ideas and techniques with wide applications in fields such as chemistry, materials science, astrophysics, surface science, plasma technology, advanced optics, aeronomy, and engineering. Laser physics is a particular connecting theme that has provided much of the continuing impetus for new developments in the field, such as quantum computation and Bose-Einstein condensation. The purpose of the series is to cover the gap between standard undergraduate textbooks and the research literature with emphasis on the fundamental ideas, methods, techniques, and results in the field.

Recently published:

F.B. Rosmej, V.A. Astapenko, V.s. Lisitsa

Plasma Atomic Physics

Vol. 104

Y.A. Rezunkov

High Power Laser Propulsion

Vol. 116

K. Sacha

Time Crystals

Vol. 114

Upcoming Volumes:

M.Y. Amusia, L.V. Chernysheva

Computation of Atomic and Molecular Processes

Introducing the ATOM-M Software Suite, Vol. 117

F. Frémont

Classical Treatment of Collisions Between Ions and Atoms or Molecules

Vol. 118
