Evidence-Based Endodontics
Editor-in-Chief: E. Rosen; I. Tsesis

Evidence-Based Endodontics presents the latest and best available scientific evidence with a view to promoting evidence-based clinical decision-making, education, and research. Submitted manuscripts are peer reviewed on the basis of strict and objective criteria concerning their novelty, methodology, and compatibility with evidence-based principles. All types of manuscripts in the field of endodontics or endodontic-related multidisciplinary studies are considered for publication.

The journal specifically encourages the submission of original studies such as controlled clinical studies, systematic reviews, and meta-analyses. Narrative reviews will primarily be considered for publication if they discuss historical perspectives or future trends in endodontics, while short reports will be considered if accompanied by a systematic review of the literature to identify and discuss other reports on comparable cases.

Giving authors in their area of expertise
the opportunity to publish open access

► High visibility thanks to unrestricted online access
► Rigorous peer-review and high-quality author services
► Creative Commons licensed – authors retain copyright
► Citation tracking and inclusion in bibliographic databases
► Easy compliance with open access mandates
