## Activitas Nervosa Superior

The Journal for Neurocognitive Research

Editor-in-Chief: P. Bob

The ANS is an international peer-reviewed journal that publishes results of original basic, clinical and theoretical research of brain and mental processes, as well as diseases of the nervous system within the spectrum from natural to mind sciences, including fields of neuroscience, psychology, psychiatry, psycho-neuroendocrinology and neuroimmunology, computational and systems modeling and neurophysics, and related molecular and cellular processes. We also welcome scholarly reviews. Articles focused on basic conceptual and philosophical problems of neuroscience and psychology are also within the scope of the journal. The journal also publishes editorials, case studies and short communications. Main aim of the journal is to facilitate an understanding of the fundamental mechanisms of neural and cognitive processes and the transfer of basic information to clinical applications.
