Energy Transitions

Main editors: B. Efir; A.A. Alabduljabbar

Energy Transitions delivers leading research that evaluates the policy, economic, and technical challenges and opportunities arising from initiatives to move toward more sustainable and less-carbon intensive power generation mixes. International and multidisciplinary in scope, the journal is fully Open Access thanks to the support of KACST and KAPSARC.

The journal will include articles that address either of two major thematic areas: (1) **energy economics and energy policy** and (2) **electrical energy technologies**. Thus, articles will focus on the policy and economic aspect of energy transitions as well as the technological aspects related to energy transitions. The Middle East and North Africa (MENA) countries are of particular interest, but lessons and experiences drawn from other countries are also welcome.

Giving authors in their area of expertise
the opportunity to publish open access

- High visibility thanks to unrestricted online access
- Rigorous peer-review and high-quality author services
- Creative Commons licensed – authors retain copyright
- Citation tracking and inclusion in bibliographic databases
- Easy compliance with open access mandates
