The Frontiers Collection

Series Editors: A.C. Elitzur, Z. Merali, M. Schlosshauer, M.P. Silverman, J.A. Tuszynski, R. Vaas

The books in this collection are devoted to challenging and open problems at the forefront of modern science and scholarship, including related philosophical debates. In contrast to typical research monographs, however, they strive to present their topics in a manner accessible also to scientifically literate non-specialists wishing to gain insight into the deeper implications and fascinating questions involved. Taken as a whole, the series reflects the need for a fundamental and interdisciplinary approach to modern science and research. Furthermore, it is intended to encourage active academics in all fields to ponder over important and perhaps controversial issues beyond their own speciality. Extending from quantum physics and relativity to entropy, consciousness, language and complex systems—the Frontiers Collection will inspire readers to push back the frontiers of their own knowledge.

Recently published:

Y. Neuman

How Small Social Systems Work

From Soccer Teams to Jazz Trios and Families

A. Aguirre, Z. Merali, D. Sloan (Eds.)

Undecidability, Uncomputability, and Unpredictability

P. Bertrand, L. Legendre

Earth, Our Living Planet

The Earth System and its Co-evolution With Organisms
