## Environmental Science and Technology Library

This multi-disciplinary book series is broad in scope and features volumes on diverse national and global environmental issues. Highly topical subjects, such as environmental health, sustainability, climate change, and risk assessment, are included. High-interest niche topics, such as environmental archaeology, also have a home in this series. As such, the series aims to provide a forum for topical environmental themes and cutting-edge science, but is not restricted by a narrow focus, thereby bringing together, in one series, a dynamic range of intriguing and important subjects.
