

The Springer Series on Demographic Methods and Population Analysis

Series Ed.: K.C. Land

In recent decades, there has been a rapid development of demographic models and methods and an explosive growth in the range of applications of population analysis. This series seeks to provide a publication outlet both for high-quality textual and expository books on modern techniques of demographic analysis and for works that present exemplary applications of such techniques to various aspects of population analysis.

Topics appropriate for the series include:

General demographic methods,

Techniques of standardization,

Life table models and methods,

Multistate and multiregional life tables, analyses, and projections,

Demographic aspects of biostatistics and epidemiology,

Stable population theory and its extensions,

Methods of indirect estimation,

Stochastic population models,

Event history analysis, duration analysis, and hazard regression models,

Demographic projection methods and population forecasts,

Techniques of applied demographic analysis, regional and local population estimates and projections,

Methods of estimation and projection for business and health care applications,

Methods and estimates for unique populations such as schools and students.

Volumes in the series are of interest to researchers, professionals, and students in demography, sociology, economics, statistics, geography and regional science, public health and health care management, epidemiology, biostatistics, actuarial science, business, and related fields.

Ideas and proposals for additional contributions to the series should be sent either to Kenneth C.
