## **Remote Sensing and Digital Image Processing**

Series Ed.: F.D. van der Meer

*Remote Sensing and Digital Image Processing book series.* Remote sensing is the acquisition of Physical data of an object without touch or contact. Earth observation satellites have been used for many decades in a wide field of applications. With the advancements in sensor technology, earth imaging is now possible at an unprecedented level of detail. Imaging spectrometers and thermal multispectral systems acquire detailed spectroscopic information of physical properties of the earth's surface. Dynamic processes can now be studied with interferometric systems. SAR interferometry, laser altimetry and high-resolution imaging allow a very detailed, three-dimensional reconstruction of the earth surface. With the advent of multi-sensor mission comes a new era of imaging, opening the possibility of integrating data from various sensor systems. The books published in the series explore these topics in remote sensing and provide a framework for related advanced digital image processing approaches.

### **Series Editorial Advisory Board:**

Michael Abrams, *NASA Jet Propulsion Laboratory, Pasadena, CA, USA*

Paul Curran, *City University London, UK*

Arnold Dekker, *CSIRO Land and Water Division, Canberra, Australia*

Steven M. de Jong, *Utrecht University, The Netherlands*

Michael Schaepman, *University of Zurich, Switzerland*

**Accepted** for inclusion in Scopus.

### **Recently published:**

D.J. Hemanth (Ed.)

**Artificial Intelligence Techniques for Satellite Image Analysis**

Vol. 24

Y. Ban (Ed.)

**Multitemporal Remote Sensing**

Methods and Applications, Vol. 20

D. Solimini

**Understanding Earth Observation**

The Electromagnetic Foundation of Remote Sensing, Vol. 23
