

## **Studies in Universal Logic**

Series Ed.: J.-Y. Beziau

This series is devoted to the universal approach to logic and the development of a general theory of logics. It covers topics such as global set-ups for fundamental theorems of logic and frameworks for the study of logics, in particular logical matrices, Kripke structures, combination of logics, categorical logic, abstract proof theory, consequence operators, and algebraic logic. It includes also books with historical and philosophical discussions about the nature and scope of logic. Three types of books will appear in the series: graduate textbooks, research monographs, and volumes with contributed papers. All works are peer-reviewed to meet the highest standards of scientific literature.

### **Recently published:**

J. Brumberg-Chaumont, C. Rosental (Eds.)

#### **Logical Skills**

Social-Historical Perspectives

A. Indrzejczak

#### **Sequents and Trees**

An Introduction to the Theory and Applications of Propositional Sequent Calculi

J. Rasga, C. Sernadas

#### **Decidability of Logical Theories and Their Combination**
