## **Springer Series in Geomechanics and Geoengineering**

Series Ed.: W. Wu

Geomechanics deals with the application of the principle of mechanics to geomaterials including experimental, analytical and numerical investigations into the mechanical, physical, hydraulic and thermal properties of geomaterials as multiphase media. Geoengineering covers a wide range of engineering disciplines related to geomaterials from traditional to emerging areas.

The objective of the book series is to publish monographs, handbooks, workshop proceedings and textbooks. The book series is intended to cover both the state-of-the-art and the recent developments in geomechanics and geoengineering. Besides researchers, the series provides valuable references for engineering practitioners and graduate students.

**\*\* Now indexed by SCOPUS, EI and Springerlink\*\***

### **Recently published:**

N. Lu, J. Mitchell (Eds.)

**Geotechnical Fundamentals for Addressing New World Challenges**

W. Wu (Ed.)

**Desiderata Geotechnica**

D. Mašin

**Modelling of Soil Behaviour with Hypoplasticity**

Another Approach to Soil Constitutive Modelling

### **Upcoming Volumes:**

J. Lin (Ed.)

**Proceedings of the International Field Exploration and Development Conference 2018**

**Submission information at the [series homepage](http://series.homepage) and [springer.com/authors](http://springer.com/authors)**
