Service Science: Research and Innovations in the Service Economy

Series Editors: B. Hefley, W. Murphy

This series captures the latest thinking, experiences and results in the increasingly important area of service science, which integrates a variety of disciplines — including areas in engineering, social sciences and management — to focus education, research and practice on an expanding services economy.

Service science encompasses the application of scientific, engineering and management disciplines to tasks that one organization performs beneficially for others, generally as part of the services sector of the economy; and the integration of computer science, operations research, industrial engineering, business strategy, management sciences, and social and legal sciences, in order to encourage innovation in how organizations create value for customers and shareholders that could not be achieved through such disciplines working in isolation.

Service Science: Research and Innovations in the Service Economy (SSRI) is an international applied research book series providing coverage of challenges, opportunities, problems, trends, and solutions encountered by both scholars and practitioners in the arena of service science. **SSRI** emphasizes the technical, economic, managerial and organizational facets of the domain. Books published in the series deal with an array of issues concerning usage, failure, success, policies, strategies and applications of information technology in the field. **SSRI** publishes applied research findings and expert opinions of leading managers in various industries.

SSRI emphasizes the global response to service science topics, concepts and methodologies across disciplines and allows its audiences to benefit from the collection and dissemination of this knowledge.
