Engineering Asset Management Review

Series Ed.: K. Brown

Engineering Asset Management Review (EAMR) is published under the auspices of the International Society of Engineering Asset Management (ISEAM). Engineering Asset Management focuses on life-cycle management of the physical assets required by a private or public firm, for the purpose of making products, and/or for providing services in a manner that satisfies various business performance rationales. In exploring the wide ranging issues involved in the management of engineered assets constituting our built environment, EAMR takes a broad view of the inter- and multi-disciplinary approach which combines science, engineering, and technology principles with human behavior and business practice. *Indexed in Scopus.*
