Issues in Agroecology – Present Status and Future Prospectus

Series Editors: W.B. Campbell, S. Lopez Ortiz

Issues In Agroecology approaches the complex panorama of interrelated topics that encompass agroecology by presenting internationally authoritative, comprehensive, and analytical reviews. Authors are invited and provide strong summaries and scholarly advances that serve as foundations for discussion leading to novel routes of research activity, application of management methodologies, and education and outreach programs. Each review represents concise and up-to-date syntheses of the rapidly growing quantity of scientific information in each chosen topic within this highly interdisciplinary field. Authors for each review assess the present status of this knowledge as to whether or not it is effectively moving toward or contributing to increased sustainability. As a part of this assessment, authors identify inadequacies, errors, and gaps in knowledge that may be hindering or opposing sustainability objectives. For each review, the authors ultimately discuss what might be needed to bring work and programs onto a better track towards achieving sustainability. Such informed assessments of the routes to realize future potential make the series an essential part of the scientific method and a necessity for researchers, teachers, students, and field professionals when dealing with increasing global environmental and socioeconomic change. This format will make Issues in Agroecology a highly citable series that is guaranteed to enlighten research teams, technology users, educators, students, and the general public on the status and advances of agroecology around the world. The series has a distinguished international editorial board to ensure the maintenance of high scientific standards. Editorial board members not only participate in the selection of topics and the general design of each issue, but also serve as associate editors, and may on occasion serve as selected editors for special volumes.
