

## Global Change Ecology and Wetlands

Series Ed.:

The Society of Wetland Scientists' book series, Global Change Ecology and Wetlands, emerged from the Society's Global Change Ecology Section. There is a growing need among wetlands managers and scientists to address problems of climate change in wetlands, and this series will fill an important literature gap in the field of global change as it relates to wetlands around the world. The goal is to highlight the latest research from the world leaders researching climate change in wetlands, to disseminate research findings on global change ecology, and to provide sound science to the public for decision-making on wetland policy and stewardship. Each volume will address a topic addressed by the annual symposium of the Society's Global Change Ecology Section.
