Assessing COVID-19 and Other Pandemics and Epidemics using Computational Modelling and Data Analysis

- Presents innovative solutions utilizing informatics to deal with various issues related to the COVID-19 outbreaks, including health data analytics, information exchange, knowledge sharing, Internet of Things (IoT)-based solutions, and the implementation, assessment, adoption, and management of healthcare informatics solutions
- Reveals recent findings and results concerning a wide variety of COVID-19 and other pandemics and epidemics using Computational Modelling and Data Analysis
- Beneficial for new researchers and practitioners working in the field to quickly know the best performing methods. Enables the comparison of different approaches in forwarding research in this important area directly impacting human life

This book comprehensively covers the topic of COVID-19 and other pandemics and epidemics data analytics using computational modelling. Biomedical and Health Informatics is an emerging field of research at the intersection of information science, computer science, and health care. The new era of pandemics and epidemics bring tremendous opportunities and challenges due to the plentiful and easily available medical data allowing for further analysis.
