Gerrard, Juliet A., Domigan, Laura J. (Hrsg.), University of Auckland, Auckland, New Zealand

# Protein Nanotechnology

## Protocols, Instrumentation, and Applications

- Includes cutting-edge methods and protocols
- Provides step-by-step detail essential for reproducible results
- Contains key notes and implementation advice from the experts

This third edition volume expands on the previous editions with updated approaches and techniques used to study protein nanotechnology and the future of nanomaterial compositions. This book is organized into Three Parts: Part One looks at recombinant protein expression in insect cells, and methods to produce molecular motors, molecular superglues, and protein templates; Part Two explores functionalization strategies and ways to incorporate functional protein components into nanodevices; Part Three discusses various instrumental techniques used to study protein nanostructures. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, Protein Nanotechnology: Protocols, Instrumentation, and Applications, Third Edition is a valuable resource for any researchers looking to expand their knowledge in this evolving field.
