

Denise Feldner (Ed.)

Redesigning Organizations

Concepts for the Connected Society

- Addresses the digital transformation in the context of business, government and society
- Offers valuable insights on the role of trust and new public policy concepts in digital networks
- Includes case studies on the most recent approaches and projects
- Addresses the most important questions of being human in the hybrid age

This book offers readers a deeper understanding of the Cyberspace, of how institutions and industries are reinventing themselves, helping them excel in the transition to a fully digitally connected global economy. Though technology plays a key part in this regard, societal acceptance is the most important underlying condition, as it poses pressing challenges that cut across companies, developers, governments and workers. The book explores the challenges and opportunities involved, current and potential future concepts, critical reflections and best practices. It addresses connected societies, new opportunities for governments, the role of trust in digital networks, and future education networks. In turn, a number of representative case studies demonstrate the current state of development in practice.
