Physics : Magnetism, Magnetic Materials

Rezende, Sergio M.

Fundamentals of Magnonics

- Serves as a text for beginning graduate physics and engineering students in magnetism and spintronics
- Features end-of-chapter problem sets
- Extensively referenced with both historical and contemporary peer-reviewed literature
- Covers a range of topics such as ferromagnetic resonance, theory of spin waves and magnon spintronics

Fundamentals of Magnonics is a textbook for beginning graduate students in the areas of magnetism and spintronics. The level of presentation assumes only basic knowledge of the origin of magnetism and electromagnetism, and quantum mechanics. The book utilizes elementary mathematical derivations, aimed mainly at explaining the physical concepts involved in the phenomena studied and enabling a deeper understanding of the experiments presented. Key topics include the basic phenomena of ferromagnetic resonance in bulk materials and thin films, semi-classical theory of spin waves, quantum theory of spin waves and magnons, magnons in antiferromagnets, parametric excitation of magnons, nonlinear and chaotic phenomena, Bose-Einstein condensation of magnons, and magnon spintronics. Featuring end-of-chapter problem sets accompanied by extensive contemporary and historical references, this book provides the essential tools for any graduate or advanced undergraduate-level course of studies on the emerging field of magnonics.
