# National Forest Inventories

## Assessment of Wood Availability and Use

- Includes in-depth descriptions of current National Forest Inventory (NFI) methods for monitoring the availability and use of wood resources from virtually all European countries, as well as selected countries in America and Asia
- Helps readers understand the data and information provided by national forest inventories, which offer an important basis for evaluating the sustainable use of wood resources, the potential of a green economy, and the effects of climate change
- Highlights the current state of the art and best practices in the assessment of national wood resources and demonstrates pathways toward harmonization and improved common reporting
- Describes original country reports prepared by the responsible n

The book presents the current state and good practices of national forest inventories in monitoring wood resources and demonstrates pathways for harmonisation and improved common reporting. Beyond a general overview over availability and use of wood resources in different countries, it provides a unique collection of original contributions from national forest inventory experts with in-depth descriptions of current NFI methods in assessing wood availability and wood use in European countries, and selected countries from America and Asia. The main topics are national definitions and improvements in common reporting of forests available for wood supply, stem quality and assortments, estimation of change including growth and drain, and tree resources outside forest land. The book is a must-have for everyone who is contributing to national forest inventories either methodologically or operatively, for people who want or need to understand national forest inventory provided data and information on the availability of wood resources. By providing profound knowledge it is a valuable basis for scientists involved in scenario modelling and analysing effects of climate change, as well as individuals in private organisations and public administrations promoting the sustainable use of natural resources and the potential of green economy.
