Collected Papers of Bertram Kostant

Volume III 1979-1988

- **Kostant is an architect of modern Lie theory.**
- **Kostant's interests span a tremendous range of Lie theory, from differential geometry to representation theory, abstract algebra and mathematical physics.**
- **Kostant's papers reach deep results, giving rise to whole new fields of activities.**
- **Kostant has been honored by numerous prestigious organizations over the six decades of his career.**

For more than five decades Bertram Kostant has been one of the major architects of modern Lie theory. Virtually all his papers are pioneering with deep consequences, many giving rise to whole new fields of activities. His interests span a tremendous range of Lie theory, from differential geometry to representation theory, abstract algebra, and mathematical physics. Some specific topics cover algebraic groups and invariant theory, the geometry of homogeneous spaces, representation theory, geometric quantization and symplectic geometry, Lie algebra cohomology, Hamiltonian mechanics, modular forms, Whittaker theory, Toda lattice, and much more. It is striking to note that Lie theory (and symmetry in general) now occupies an ever increasing larger role in mathematics than it did in the fifties. Now in the sixth decade of his career, he continues to produce results of astonishing beauty and significance for which he is invited to lecture all over the world. This is the third volume (1975-1985) of a five-volume set of Bertram Kostant's collected papers. A distinguished feature of this third volume is Kostant's commentaries and summaries of his papers in his own words.
