Advances on Computational Intelligence in Energy

The Applications of Nature-Inspired Metaheuristic Algorithms in Energy

Series: Green Energy and Technology

- Addresses the applications of computational intelligence algorithms in energy
- Illustrates the steps required for applying bio-inspired, meta-heuristic algorithms in energy
- Describes significant advances and industrial experiences

Addressing the applications of computational intelligence algorithms in energy, this book presents a systematic procedure that illustrates the practical steps required for applying bio-inspired, meta-heuristic algorithms in energy, such as the prediction of oil consumption and other energy products. Contributions include research findings, projects, surveying work and industrial experiences that describe significant advances in the applications of computational intelligence algorithms in energy. For easy understanding, the text provides practical simulation results, convergence and learning curves as well as illustrations and tables. Providing a valuable resource for undergraduate and postgraduate students alike, it is also intended for researchers in the fields of computational intelligence and energy.
