Sandro Galea (Ed.)

Macrosocial Determinants of Population Health

- “Structural interventions” is a hot topic within the study in public health
- Will also be of great interest to the ongoing discussion of globalization
- Sandro Galea is very prominent in this area

Macrosocial Determinants of Population Health explores social factors such as culture, mass media, political systems, and migration that influence public health while systematically considering how we may best study these factors and use our knowledge from this study to guide public health interventions. Starting from the dual premises that a population is not merely the sum of its individuals and that the improvement of population health is not at odds with the practical desire of improving the health of individuals, Sandro Galea and 33 expert contributors present chapters in three sections. The first section includes eleven chapters that each discuss one macrosocial determinant of population health. The factors covered by these chapters encompass a broad range of intellectual concerns, ranging from regulations and legal frameworks (global governance, patent law and policy), to overarching global phenomena (globalization, migration, urbanization, the media), to a specific consideration of the role of economic, political, and corporate policies and practices. The second section considers particular methodologic issues pertinent to those interested in the study of how macrosocial factors influence the health of populations, offering insights on ecological studies and causal inference, and weighing how we may best study the overlapping roles of determinants at local, state, and national levels. The third section presents a framework for interventions that aim to improve population health and innovative case studies that show this framework in action. Throughout, contributors emphasize the potential of population strategies to influence traditional risk factors associated with health and disease. Each section ends with Galea's integrative chapters, bringing the observations and conclusions from the chapters into clear, usable focus.
