Tsuneya Ikezu, Howard E. Gendelman (Eds.)

Neuroimmune Pharmacology

- Features authors who are some of the foremost investigators in the field of neuroimmune pharmacology
- Reviews topics that embrace the link between the immune system and the pathogenesis of neurodegenerative disorders
- Includes an accompanying CD-ROM with access to lectures, slide presentations, and question and answers on neuroimmune pharmacology

In the past two decades, enormous strides have been made. These tools for exploring brain biochemistry at the cellular level in our understanding of the relationships between inflammation opened new vistas for understanding brain functioning, innate immune responses, adaptive immune responses, and the pathogenesis of human disease. Using these tools, and degenerative human diseases. The developing information in our laboratory and that of Joseph Rogers in Sun City, Texas, has mostly appeared in specialty journals that have dealt with related fields. As a result, contemporary scientists have had a difficult time finding sources, even in review articles, that provide an integrated picture. This volume, by assembling chapters that demonstrate the relationship between these historically separated fields, overcomes that difficulty. There are sections on immunology of the nervous system, diseases that result from immunological dysfunction, current therapeutic approaches, and prospects for the future. Overall, it integrates as the chapters in this volume illustrate.
