Fundamental Problems in Computing

Essays in Honor of Professor Daniel J. Rosenkrantz

- A convenient collection of many seminal papers in computer science authored by Professor Daniel J. Rosenkrantz
- Contains contributed chapters authored by well known researchers
- Chapters cover a variety of important topics in computer science (e.g. algorithm analysis, complexity of voting systems, computational epidemiology, concurrency control for databases)
- Chapters are suitable for self-study by graduate students in computer science and applied mathematics

Fundamental Problems in Computing is in honor of Professor Daniel J. Rosenkrantz, a distinguished researcher in Computer Science. Professor Rosenkrantz has made seminal contributions to many subareas of Computer Science including formal languages and compilers, automata theory, algorithms, database systems, very large scale integrated systems, fault-tolerant computing and discrete dynamical systems. For many years, Professor Rosenkrantz served as the Editor-in-Chief of the Journal of the Association for Computing Machinery (JACM), a very prestigious archival journal in Computer Science. His contributions to Computer Science have earned him many awards including the Fellowship from ACM and the ACM SIGMOD Contributions Award.
