# Towards a Sustainable Philosophy of Endurance Sport

Cycling for Life

Series: Library of Ethics and Applied Philosophy

- The first book to cover the field of endurance sport and sustainability from a combined analytic-continental perspective
- Aimed at a wide audience including policy makers, sport scientists and environmental philosophers
- Builds on a unique perspective of continental philosophical tradition but also "ecosophy" and American pragmatism

This book provides new perspectives on endurance sport and how it contributes to a good and sustainable life in times of climate change, ecological disruption and inconvenient truths. It builds on a continental philosophical tradition, i.e. the philosophy of among others Peter Sloterdijk, but also on "ecosophy" and American pragmatism to explore the idea of sport as a voluntary attempt to overcome unnecessary obstacles. Since ancient times, human beings have been involved in practices of the Self in order to work on themselves and improve themselves, for instance by strengthening their physical condition and performance through sport. In the contemporary world, millions of individuals engage in endurance sports such as running, swimming and cycling, to get or keep themselves in shape. This study focuses on the ethical dimension of long-distance sport, notably cycling, as a way to become better citizens, but also to contribute to a more sustainable society and healthier planet. Dominant world-views are challenged and an alternative vision is presented. Discourse analysis and conceptual analysis are combined with phenomenology and self-observations of a dedicated practitioner of endurance sport. This book is a great source for philosophers, sport philosophers, environmental philosophers, sport scientists, policy makers, sport journalists, and endurance sport practitioners.
