Differential Undercounts in the U.S. Census

Who is Missed?

Series: SpringerBriefs in Population Studies

- This open access book provides an overview of which groups have the highest net undercounts and which groups have the higher undercount differentials in the US census
- Discusses why census undercounts occur
- Combines all the statistical evidence on this topic in one publication

This open access book describes the differences in US census coverage, also referred to as "differential undercount", by showing which groups have the highest net undercounts and which groups have the greatest undercount differentials, and discusses why such undercounts occur. In addition to focusing on measuring census coverage for several demographic characteristics, including age, gender, race, Hispanic origin status, and tenure, it also considers several of the main hard-to-count populations, such as immigrants, the homeless, the LGBT community, children in foster care, and the disabled. However, given the dearth of accurate undercount data for these groups, they are covered less comprehensively than those demographic groups for which there is reliable undercount data from the Census Bureau. This book is of interest to demographers, statisticians, survey methodologists, and all those interested in census coverage.
