Anand Nayyar, Akshi Kumar (Eds.)

A Roadmap to Industry 4.0: Smart Production, Sharp Business and Sustainable Development

Series: Advances in Science, Technology & Innovation

- - Helps readers understand the concepts & technologies driving Industry 4.0
- - Covers topics from three perspectives: theory, practice and research
- - Helps business strategy heads and visionaries to recognize and verify the potential of Industry 4.0
- - Includes real-world case studies addressing current sustainability & future viability

Business innovation and industrial intelligence are paving the way for a future in which smart factories, intelligent machines, networked processes and Big Data are combined to foster industrial growth. The maturity and growth of instrumentation, monitoring and automation as key technology drivers support Industry 4.0 as a viable, competent and actionable business model. This book offers a primer, helping readers understand this paradigm shift from industry 1.0 to industry 4.0. The focus is on grasping the necessary pre-conditions, development & technological aspects that conceptually describe this transformation, along with the practices, models and real-time experience needed to achieve sustainable smart manufacturing technologies. The primary goal is to address significant questions of what, how and why in this context, such as: What is Industry 4.0? What is the current status of its implementation? What are the pillars of Industry 4.0? How can Industry 4.0 be effectively implemented? How are firms exploiting the Internet of Things (IoT), Big Data and other emerging technologies to improve their production and services? How can the implementation of Industry 4.0 be accelerated? How is Industry 4.
