# Practical Applications of Computational Biology and Bioinformatics, 13th International Conference

Series: Advances in Intelligent Systems and Computing

- Presents the latest research on practical applications of computational biology & bioinformatics
- Features the outcomes of the 13th International Conference on Practical Applications of Computational Biology & Bioinformatics held in Ávila, Spain, from 26th to 28th June 2019
- Discusses interdisciplinary applications of computational intelligence, exploring the interactions between bioinformatics, chemoinformatics and systems biology

This book features 21 papers spanning many different sub-fields in bioinformatics and computational biology, presenting the latest research on the practical applications to promote fruitful interactions between young researchers in different areas related to the field. Next-generation sequencing technologies, together with other emerging and diverse experimental techniques, are evolving rapidly, creating numerous types of omics data. These, in turn, are creating new challenges for the expanding fields of bioinformatics and computational biology, which seek to analyse, process, integrate and extract meaningful knowledge from such data. This calls for new algorithms and approaches from fields such as databases, statistics, data mining, machine learning, optimization, computer science, machine learning and artificial intelligence.
