Migration, Social Capital, and Health

Insights from Ghana and Uganda

Series: Global Perspectives on Health Geography

- Discusses internal migration into selected settlements in Ghana and Uganda, and the disease patterns and environmental health risks to such settlements
- Assesses the role of social capital across scales in the acculturation process of migrants at their destinations
- Describes the social determinants of health with emphasis on the intersections between social capital, lifestyles, and health literacy

This book brings readers the first scientific publication, using a mixed-method approach, on the internal migration dynamics regarding disease ecologies of informality and the interactions between social capital, lifestyles, health literacy, and health outcomes in the context of informal settlements in two developing countries - Ghana and Uganda. Through the prism of the concepts of place and scale, the book demonstrates the myriad of ways by which place or context directly and indirectly influence migrant's health knowledge, literacy, and outcomes in poor urban slums. Readers will learn about the multi-faceted linkages between social capital, acculturation, and health in places of deprivation via quantitative methods (e.g. surveys) and qualitative methods such as focus group discussions, in-depth interviews, concept mapping, and body health mapping. Chapters 1-2 provide an overview of internal migration into urban slums of Ghana and Uganda, and discuss the intersections between migration, social capital, and health in a global context. Chapters 3-7 address disease patterns, environmental risks to health, health literacy of migrants, social capital and acculturation, and social capital and health. The book will be of interest to professors and students, as well as policy makers in low to middle income countries for planning targeted interventions.
