Mathematics : Mathematical Applications in the Physical Sciences

Lutscher, Frithjof

Integrodifference Equations in Spatial Ecology

- Includes real applications to ecological questions throughout
- Provides an overview of the fundamental questions of spatial ecology
- Considered the first comprehensive exposition and review of the mathematical and ecological literature on integrodifference equations

This book is the first thorough introduction to and comprehensive treatment of the theory and applications of integrodifference equations in spatial ecology. Integrodifference equations are discrete-time continuous-space dynamical systems describing the spatio-temporal dynamics of one or more populations. The book contains step-by-step model construction, explicitly solvable models, abstract theory and numerical recipes for integrodifference equations. The theory in the book is motivated and illustrated by many examples from conservation biology, biological invasions, pattern formation and other areas. In this way, the book conveys the more general message that bringing mathematical approaches and ecological questions together can generate novel insights into applications and fruitful challenges that spur future theoretical developments. The book is suitable for graduate students and experienced researchers in mathematical ecology alike.
