# Health Policy and Systems Responses to Forced Migration

- Addresses forced migration as a phenomenon of global importance
- Applies a health-systems lens to forced migration
- Presents an interdisciplinary perspective bridging disciplinary divides
- Serves as a unique resource summarizing knowledge on health systems performance and challenges in the context of forced migration
- Lays the foundations for future research on health policy and systems responses to forced migration

Forced migration has yet to be sufficiently addressed from the perspective of health policy and systems research, resulting in limited knowledge on systemlevel interventions and policies to improve the health of forced migrants. The contributions within this edited volume seek to rectify this gap in the literature by compiling the existing knowledge on health systems and health policy responses to forced migration with a focus on asylum seekers, refugees, and internally displaced people. It also brings together the work of research communities from the fields of political science, epidemiology, health sciences, economics, psychology, and sociology to push the knowledge frontier of health research in the area of forced migration towards health policy and systems-level interventions, while also framing potential routes for further research in this area.
