Biomedicine : Cancer Research

Birbrair, Alexander (Ed.)

Tumor Microenvironment

Non-Hematopoietic Cells

- Provides a thorough review of fibroblasts, pericytes, endothelial cells, adipocytes, and nerves in the tumor microenvironment
- Covers the non-hematopoietic constituents of tumor microenvironment for an audience of advanced cell biology and cancer biology students
- Editor and contributors represent international perspective and key leaders' expertise

Revealing essential roles of the tumor microenvironment in cancer progression, this volume focuses on non-hematopoietic cells within the tumor microenvironment. Further, it teaches readers about the roles of distinct constituents of the tumor microenvironment and how they affect cancer development. Topics include fibroblasts, adipocytes, mesenchymal stem cells, stellate cells, and more. Taken alongside its companion volumes, *Tumor Microenvironment: Non-Hematopoietic Cells* updates us on what we know about the different aspects of the tumor microenvironment as well as future directions. Useful for introducing the newer generation of researchers to the history of how scientists focused in the tumor microenvironment and how this knowledge is currently applied for cancer treatments, it will be essential reading for advanced cell biology and cancer biology students as well as researchers seeking an update on research in the tumor microenvironment. All of the chapter authors are renowned international experts in the cancer biology field in specific subfields that will be the focus of their chapters.
