LaMeris, Brock J.

Embedded Systems Design using the MSP430FR2355 LaunchPad™

- Written the way the material is taught, enabling a bottoms-up approach to learning which culminates with a high-level of learning, with a solid foundation
- Emphasizes examples from which students can learn: contains a program examples that can be run for nearly every section in the book
- Targets a widely popular embedded computer, the Texas Instruments MSP430FR2355
- Covers both assembly language and C language programming of the MSP430, with examples that are meant to be coded and run on an MSP430FR2355 LaunchPad™ Development Kit directly
- Describes specific learning outcomes for each activity, so that the reader knows why they are doing what they are doing, along with abundant assessment tools,

This textbook for courses in Embedded Systems introduces students to necessary concepts, through a hands-on approach. **LEARN BY EXAMPLE** – This book is designed to teach the material the way it is learned, through example. Every concept is supported by numerous programming examples that provide the reader with a step-by-step explanation for how and why the computer is doing what it is doing. **LEARN BY DOING** – This book targets the Texas Instruments MSP430 microcontroller. This platform is a widely popular, low-cost embedded system that is used to illustrate each concept in the book. The book is designed for a reader that is at their computer with an MSP430FR2355 LaunchPad™ Development Kit plugged in so that each example can be coded and run as they learn. **LEARN BOTH ASSEMBLY AND C** – The book teaches the basic operation of an embedded computer using assembly language so that the computer operation can be explored at a low-level. Once more complicated systems are introduced (i.e., timers, analog-to-digital converters, and serial interfaces), the book moves into the C programming language.
