# Migration and Environmental Change in Morocco

In search for Linkages Between Migration Aspirations and (Perceived) Environmental Changes

Series: IMISCOE Research Series

- This open access book offers new insights in the ways migration can be seen as an adaptation strategy to deal with climate change in Morocco
- Illustrates how environmental changes have already urged people to migrate over the last decades
- Reflects upon existing debates on environmental migration, from different disciplines and for different stakeholders

This open access book studies the migration aspirations and trajectories of people living in two regions in Morocco that are highly affected by environmental change or emigration, namely Tangier and Tinghir, as well as the migration trajectories of immigrants coming from these regions currently living in Belgium. This book departs from the development of a new theoretical framework on the relationship between environmental changes and migration that can be applied to the Moroccan case. Qualitative research conducted in both countries demonstrate how the interplay between migration and environmental factors is not as straightforward as it seems, due to its wider social, political, economic, demographic and environmental context. Findings show how existing cultures of migration, remittances, views on nature and discourses on climate change create distinct abilities, capacities and aspirations to migrate due to environmental changes. The results illustrate how migration and environmental factors evolve gradually and mutually influence each other. In doing so, this book offers new insights in the ways migration can be seen as an adaptation strategy to deal with environmental change in Morocco.
