Business and Management : Business Taxation/Tax Law

Shome, Parthasarathi

Taxation History, Theory, Law and Administration

- Discusses taxation in emerging economies with special focus on India
- Illustrates the rationale of different taxation concepts and its ramifications
- Addresses the role of the OECD in formulating taxation rules

Tax practitioners are unfamiliar with tax theory. Tax economists remain unfamiliar with tax law and tax administration. Most textbooks relate mainly to the US, UK or European experiences. Students in emerging economies remain unfamiliar with their own taxation history. This textbook fills those gaps. It covers the concept of taxes in regards to their rationale, principles, design, and common errors. It addresses distortions in consumer choices and production decisions caused by tax and redressals. The main principles of taxation—efficiency, equity, stabilization, revenue productivity, administrative feasibility, international neutrality—are presented and discussed. The efficiency principle requires the minimisation of distortions in the market caused by tax. Equity in taxation is another principle that is maintained through progressivity in the tax structure. Similarly, other principles have their own ramifications that are also addressed. A country's constitutional specification of tax assignment to different levels of government—central, state, municipal—are elaborated. The UK is more centralised than the US and India. India has amended its constitution to introduce a goods and services tax (GST) covering both central and state governments. Drafting of tax law is crucial for clarity and this aspect is addressed.
