Environment : Environmental Physics

Rodrigues, A., Sardinha, R.A., Pita, G.

Fundamental Principles of Environmental Physics

- Presents a thorough, interdisciplinary overview of environmental physics
- Addresses everything from fundamental principles to mathematical formulations related to the topic
- Develops a methodology to characterize the atmospheric surface layer, mass, and energy flow
- Provides numerous solved examples, illustrations, and applications

This book is an interdisciplinary and accessible guide to environmental physics. It allows readers to gain a more complete understanding of physical process and their interaction with ecological ones underpin important environmental issues. The book covers a wide range of topics within environmental physics, including: • natural and anthropogenic canopies, including forests, urban or wavy terrains; • the fundamentals of heat transfer; • atmospheric flow dynamics; • global carbon budget; • climate change; and • the relevance of biochar as a global carbon sink. Including solved exercises, numerous illustrations and tables, as well as an entire chapter focused on applications, book is of interest to researchers, students and industrial engineers alike.
