Antonio M. Esquinas (Ed.)

Pulmonary Function Measurement in Noninvasive Ventilatory Support

- Reveals how pulmonary function measurement can be used to determine the “timing” for noninvasive ventilator support options
- Includes descriptions and recommendations for pulmonary function measurement before NIV/selecting candidates; during NIV; in long-term applications (health care organizations)
- Offers practical recommendations on how NIV and lung function measurement can improve outcomes and quality of life

This book comprehensively addresses the use of pulmonary function measurement for the evaluation, screening and timing of noninvasive mechanical ventilation (NIMV) from hospital to home care. To do so, it describes three clinical stages of NIMV support: before NIV, to detect early markers and determine whether NIV is appropriate; during NIV, to evaluate NIV response; and in long-term NIV support. Additionally, it assesses a range of complementary health care organizations (pulmonary function labs, pneumology wards, semi-intensive care units and home mechanical ventilation programs), techniques (chest physiotherapy/airway secretions, etc.) and applications. In closing, the book offers practical recommendations on how noninvasive ventilation and lung function measurement can improve outcomes and quality of life, making it a valuable resource for all specialists, e.g. intensivists and pneumologists, as well as anesthesiologists and therapists.
