

Marcus Brazil, Martin Zachariasen

Optimal Interconnection Trees in the Plane

Theory, Algorithms and Applications

Series: Algorithms and Combinatorics

- The first comprehensive book on the geometric Steiner tree problem since the 1990s
- Clearly written proofs, supported by 120 color figures
- Includes both the underlying mathematical theory and algorithms for Steiner trees, with an emphasis on exact solutions

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems. It presents, for the first time in the literature, a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions. The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks, with an emphasis on exact solutions. Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks, also known as Steiner trees, in the plane. They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees. The book also details numerous breakthroughs in this area over the past 20 years, features clearly written proofs, and is supported by 135 colour and 15 black and white figures. It will help graduate students, working mathematicians, engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible.

2015, XVII, 344 p. 150 illus., 135 illus. in color.
