

Robert Trappi (Ed.)

A Construction Manual for Robots' Ethical Systems

Requirements, Methods, Implementations

Series: Cognitive Technologies

- Explores modern applications such as assistive robots and self-driving cars
- Valuable for practitioners and researchers in robotics, computer science and engineering
- Contributors among leading researchers on this topic

This book will help researchers and engineers in the design of ethical systems for robots, addressing the philosophical questions that arise and exploring modern applications such as assistive robots and self-driving cars. The contributing authors are among the leading academic and industrial researchers on this topic and the book will be of value to researchers, graduate students and practitioners engaged with robot design, artificial intelligence and ethics.

1st ed. 2015, VIII, 210 p. 22 illus., 17 illus. in color.
