Ambient Intelligence-Software and Applications – 7th International Symposium on Ambient Intelligence (ISAmI 2016)

Series: Advances in Intelligent Systems and Computing

- Latest research on Ambient Intelligence incl. Software and Applications
- Results of the 7th International Symposium on Ambient Intelligence (ISAmI 2016), held in Sevilla, Spain, from 1st to 3rd June 2016
- Focuses on offering ways to interact with systems in a more natural way by means of user friendly interfaces

Ambient Intelligence (AmI) is a recent paradigm emerging from Artificial Intelligence, where computers are used as proactive tools assisting people with their day-to-day activities, making everyone's life more comfortable. Another main concern of AmI originates from the human computer interaction domain and focuses on offering ways to interact with systems in a more natural way by means user friendly interfaces. This field is evolving quickly as can be witnessed by the emerging natural language and gesture based types of interaction. The inclusion of computational power and communication technologies in everyday objects is growing and their embedding into our environments should be as invisible as possible. In order for AmI to be successful, human interaction with computing power and embedded systems in the surroundings should be smooth and happen without people actually noticing it. The only awareness people should have arises from AmI: more safety, comfort and wellbeing, emerging in a natural and inherent way.
