Education : Mathematics Education

Liljedahl, P., Santos-Trigo, M., Malaspina, U., Bruder, R.

Problem Solving in Mathematics Education

- **Surveys the state-of-the-art in research on mathematical problem-solving**
- **Discusses the work of key researchers in the area**
- **Highlights potential directions for future research**

This survey book reviews four interrelated areas: (i) the relevance of heuristics in problem-solving approaches – why they are important and what research tells us about their use; (ii) the need to characterize and foster creative problem-solving approaches – what type of heuristics helps learners devise and practice creative solutions; (iii) the importance that learners formulate and pursue their own problems; and iv) the role played by the use of both multiple-purpose and ad hoc mathematical action types of technologies in problem-solving contexts – what ways of reasoning learners construct when they rely on the use of digital technologies, and how technology and technology approaches can be reconciled.
