Biomedicine : Cancer Research

Telerman, Adam, Amson, Robert (Eds.), Institut Gustave Roussy, Villejuif, France

TCTP/tpt1 - Remodeling Signaling from Stem Cell to Disease

- Broadens your understanding TCTP's role in various diseases
- Illustrates the various interactions of TCTP with other Proteins
- Reviews the history of TCTP research
- New target and novel approach in cancer treatment

This book highlights the role of the Translationally Controlled Tumor Protein (TCTP) in cell signaling, cell fate and the resulting connection to disease development. It begins by discussing the structure/function of TCTP, before exploring its role in different species ranging from plants to Drosophila and covering fields such as development, the cytoskeleton, cell division, DNA fragility and apoptosis. In turn, the book's final section is devoted to the role of TCTP in disease, namely asthma and diverse cancers, and ultimately as a target for the treatment of malignancies. What is the common denominator between all these processes and why is TCTP necessary in order for them to occur, even in the worst case such as cancer? The book seeks to provide meaningful answers to this and other key questions. Presenting a broad and revealing view on the topic, it offers an informative guide for scientists and students alike.
