Economics : Economic Theory/Quantitative Economics/Mathematical Methods

Puu, Tõnu, Umeå University, Umeå, Sweden

# Disequilibrium Economics

Oligopoly, Trade, and Macrodynamics

- Provides a brief introduction to economics for mathematicians and other modelers
- Offers an inventory of explicit relations that are useful for the global dynamic analysis of economic models
- Proposes twelve, not yet fully analyzed research projects for further study

This book discusses mathematical models for various applications in economics, with a focus on non-linear dynamics. Based on the author's over 50 years of active work in the field, the book has been inspired by models from the period between 1920 and 1950. Following a brief introduction to economics for mathematicians and other modelers, it assembles a repository of useful specific functions for global dynamic modeling. Furthermore, twelve "research stubs" – outlined research agendas that have not yet been fully worked on – are suggested for further study and could even be expanded to entire research projects. The book is a valuable resource, particularly for young scientists who are skilled in mathematical and computational techniques and are looking for applications in economics.
